

FIIF is organizing a JAM session on 22 September in Helsinki area starting at 9:00 and continuing approximately until 12:00

This time the JAM session is focused on Industrial Internet cyber safety related issues. On the agenda we will have few key-note speakers and a plenty of company best practises and hotspot pitchings.

The event will be held in Helsinki area and the exact location will be communicated as soon as possible.

More information to follow on the FIIF website <http://www.fiif.fi/>

Best regards,
Mikael Haag
FIIF Catalyst

Ficonic awarded for its IoT solution supporting Transportation and Logistics sectors

Ficonic’s asset was lately awarded by KasvuOpen DigiPolku for its complete advanced and safe solution related to Transportation and Logistics industries:

<http://kasvuopen.fi/tiedotteet/ficonic-solutions-oy-digipolun-voittoon>

The products developed by Ficonic team are the result of over 6 years of design and implementation deployed to major OEMs globally.

With Ficonic’s solution, Transportation and Logistics companies benefit from:

- Secure authentication and object / vehicle tracking
- Real-time traffic and road info
- Non driver distracting applications
- Sensors collecting data from various devices
- M2M screen and audio replication
- Remote use of devices and applications
- Applications and Cloud for viewing data and analysis

As good news never come alone, Ficonic received another award from Nordea for its smart and safe innovations: <http://www.nordea.com/fi/media/uutiset-ja-lehdistotiedotteet/News-fi/2015/2015-06-18-nordea-tarjoaa-tyotilan-start-up-yritykselle.html>

Partners for the Junction-hackathon during the Slush Conference in November 2015

As part of the Slush Hacks -concept, we are organising the [Junction](#)-hackathon during the [Slush](#) conference in November of 2015. We are currently looking for partners, especially from the industrial sector, with whom we could make Junction the best tech-event of the whole year.

During the event the participants build computer programs in 7 different categories. Each category, or "Track", is designed to solve one of today's largest challenges. In addition to the company-hosted challenges we have also created an open track, in which the participants may freely bring their ideas to life, while still getting access to all the tools provided at the event. The tools used can be from anywhere, and right now we are looking for companies who want to provide theirs to be innovated with. The winner of each track gets to pitch their idea on Stage at Slush in front of a live audience and a jury of investors.

We hand-pick the 500 competitors out of all applicants based on their portfolios and CVs. This participant data is open to our partners and can be filtered for you based on your needs. In addition to the hackers and designers we are expecting about 100 company representatives to be attending.

Team Finland's growth program supports Finnish industrial internet companies – join now!

Big Data and IoT will transform companies to open up a new era of economic growth and competitiveness. Kicked off in August, Team Finland's Growth Program Capitalize Your Knowledge supports Finnish companies, for example, in joining their forces and benefiting from this huge global opportunity together.

What's in it for companies? The program aims at enabling a quicker market entry in chosen markets by providing detailed market insight and information on business opportunities. The program will also generate concrete business leads and matchmaking: we arrange meetings with potential customers and channel partners and promote Finnish knowhow in the field of industrial internet and Big Data solutions.

Initially, the Program's target markets are Germany, the UK, Sweden and Denmark, later on also the US and Asia.

The program already has over 20 participating companies who share the interest of growing their business. However, you are still warmly welcome to join!
