# The IoT Forge Foundation – From Idea to Validation

- The IoT Forge Foundation is a non-profit organization that operates independently, has its own staff, and supports companies working on any IoT development platform.
- Support model includes: Personnel know-how – 600m2 lab space for SW, HW and Mechanics – Financial support
- The support provided by the foundation is free of charge and does not result in ownership or IPR commitments. The foundation and its laboratory are in Keilalahti, Espoo.
- Since September 2017, the IoT Forge Foundation has offered companies in the IoT segment a possibility to work at their laboratory and benefit from the productization know-how of their personnel. During the first year, 82 companies from different branches and 20 locations in Finland have found the IoT Forge's services.
- All Finnish start-ups and SMEs operating in the IoT field can apply for a period in the laboratory. The application can be found at [www.iotforge.fi](http://www.iotforge.fi) / [www.iotpaja.fi](http://www.iotpaja.fi).
- In addition to product development support at the initial stage, the Forge aims to create an independent IoT cooperation network that will provide companies, cities and educational institutions with an opportunity to find collaboration partners. Our target is to advance the IoT scene in Finland on a broadest possible front.
