# VTT - 5G Test Network as a Service

- Enhancing the reliability and efficiency of telecommunication systems are top priorities for VTT. We have a unique and adaptable network and test environment that includes 5G, LTE, non-terrestrial and IoT networks, serving the sectors of industry, space, cyber security and public authorities.

- Our test network enables us to develop advanced applications and services, for example, for autonomous vehicles, industrial systems, smart products, healthcare, smart energy and critical infrastructures.

- Tailored projects for customer needs
- Adaptable environment
- Pre-commercial product development
- Strong knowledge on advanced application areas
