Prerequisites for successful IT cost management

Know your numbers

Melkki Cost Reduction Approach

IT cost savings horizons

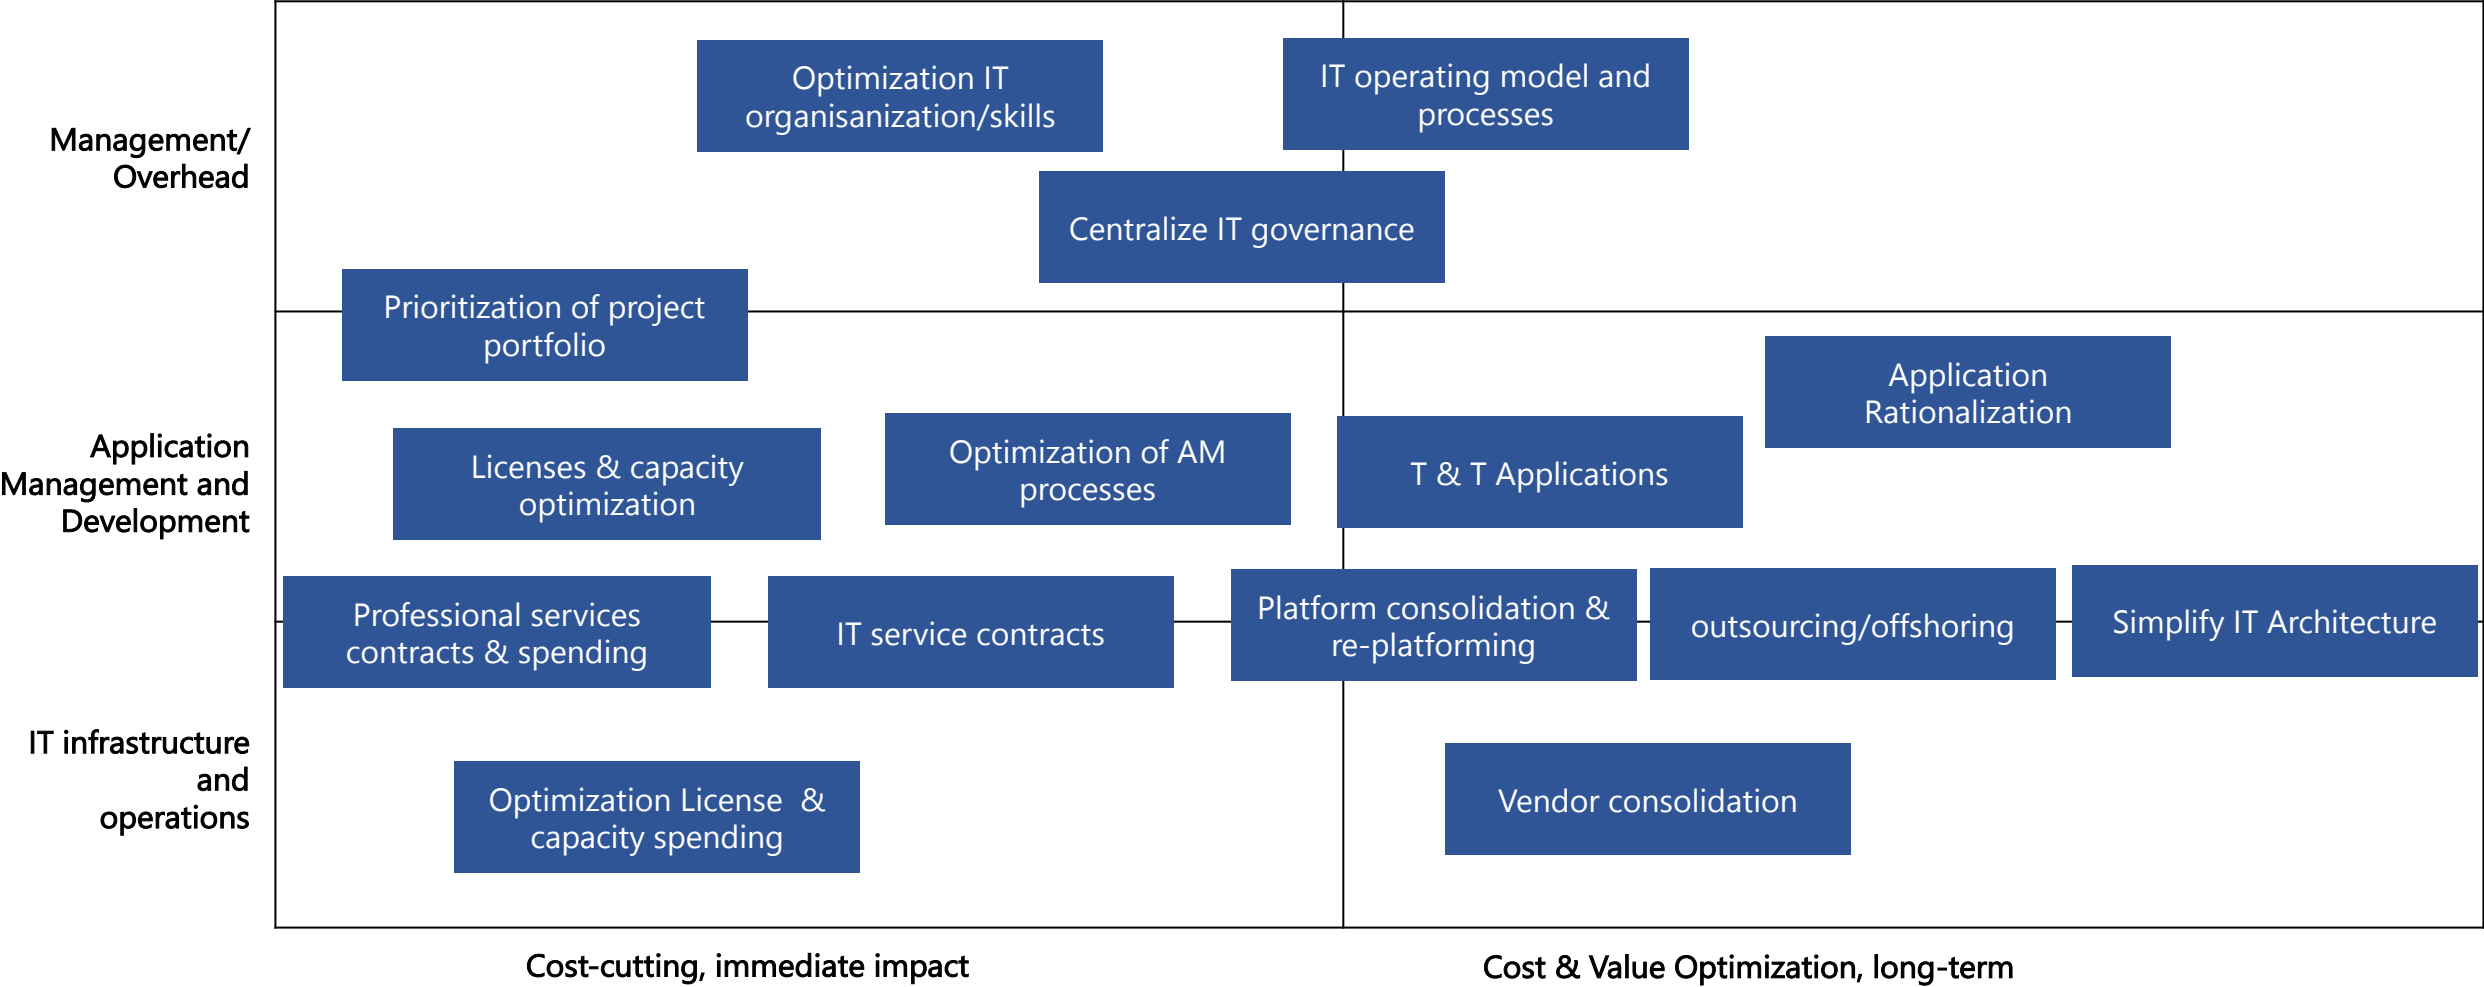

Cost Cutting

- Reactive approach to reduce & cut spending
- Goal for immediate reductions
 - Eliminate expenditure
 - Renegotiate
 - Place costs on hold

Cost Optimization

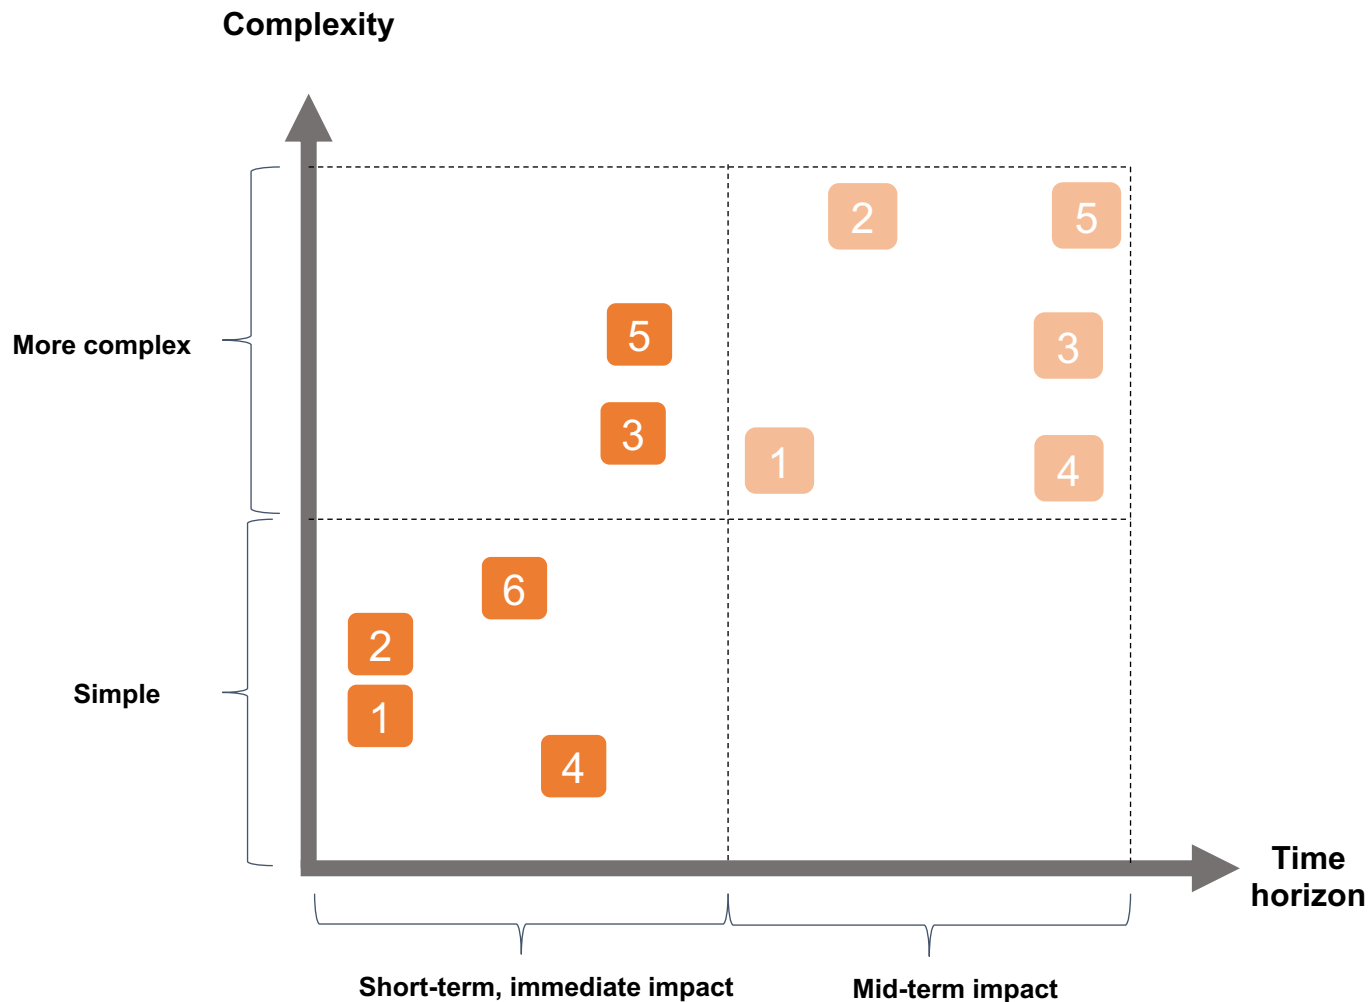

- Programmatic approach
- Goal for structural improvements
 - Rationalize
 - Consolidate
 - Improve efficiency
 - Shift spend

IT Cost reduction framework

Short- & mid-term cost cutting and activity complexity

melkki

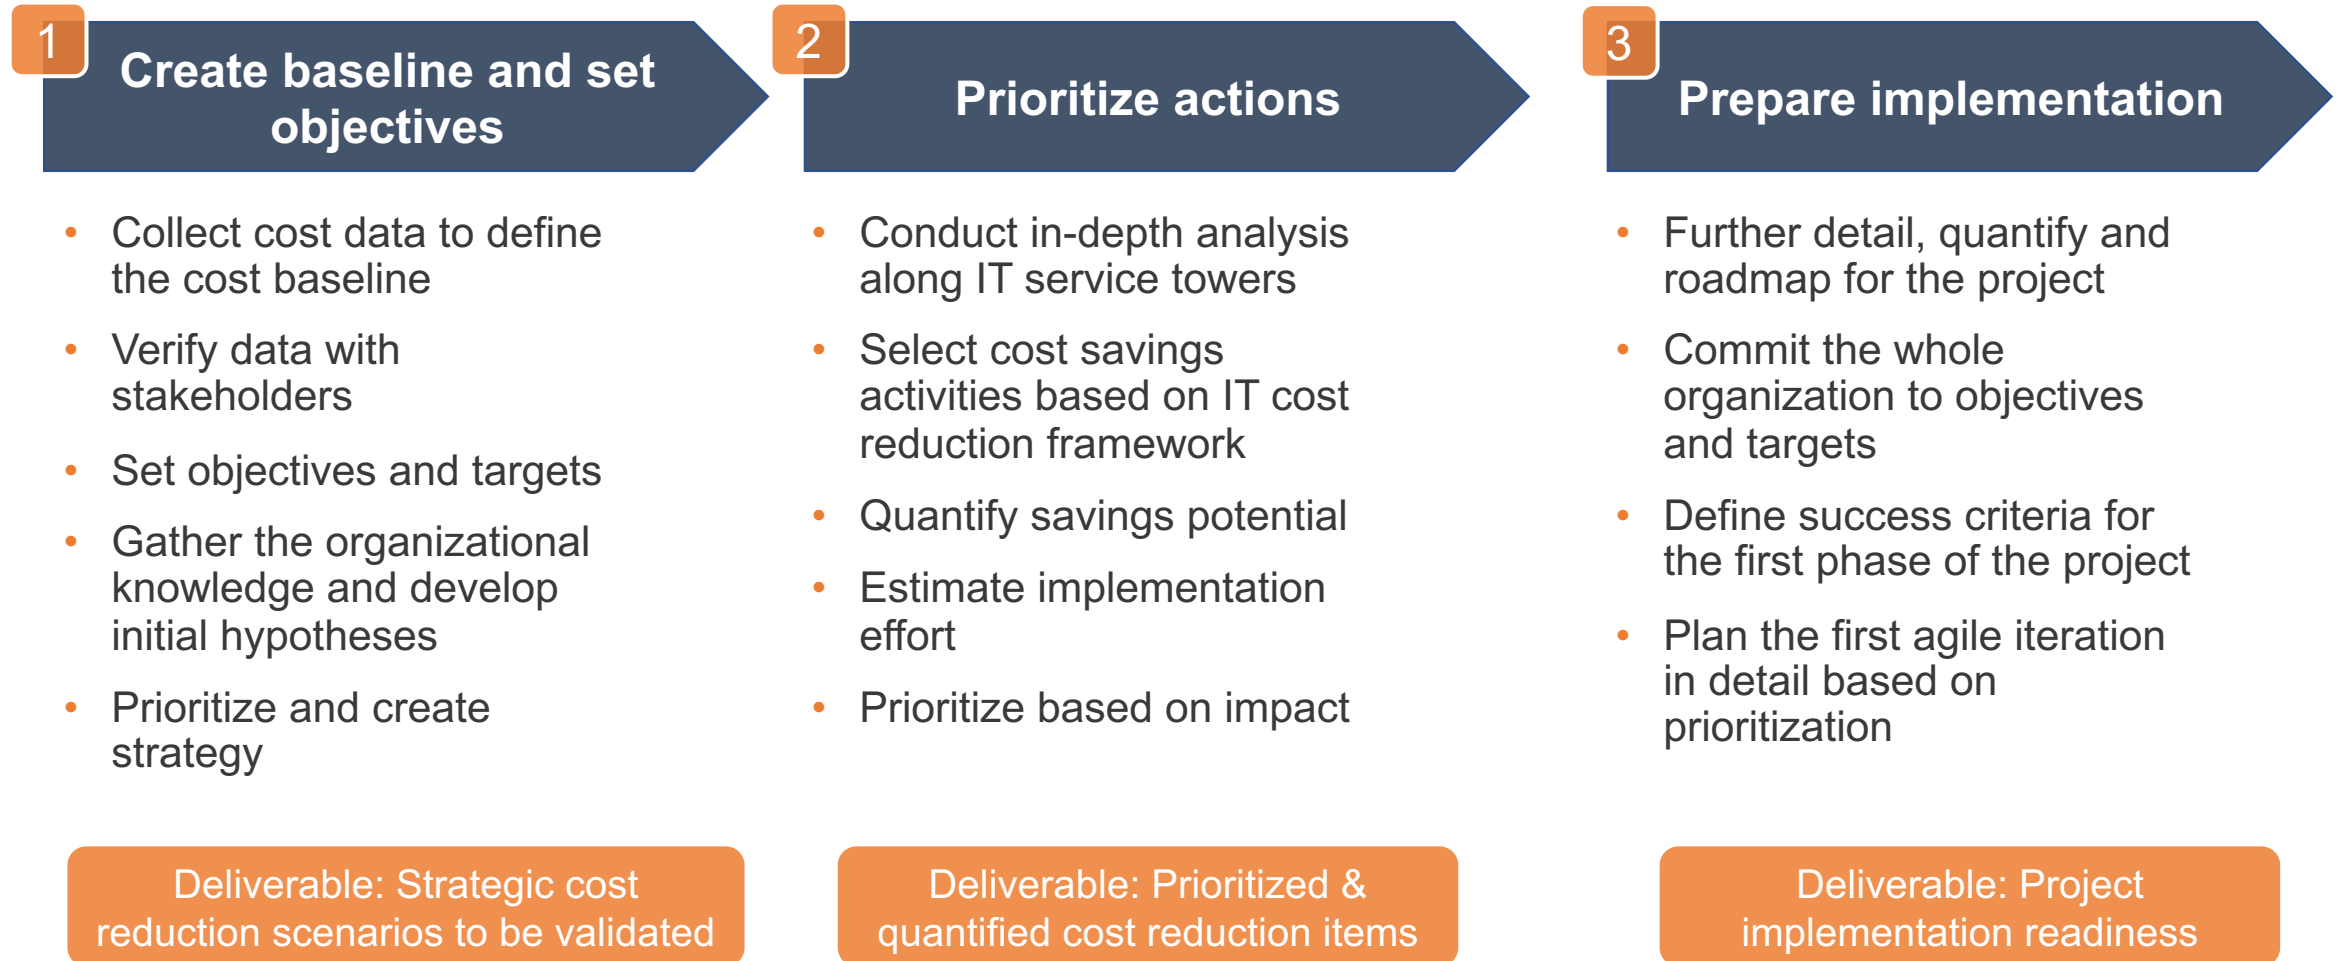

SHORT-TERM

- 1 Call for strategic partnerships
- 2 Optimize licenses and capacity
- 3 Renegotiate IT service contracts
- 4 Renegotiate Professional services contracts
- 5 Tune infrastructure
- 6 Assess your project portfolio

MID-TERM

- 1 Assess and re-negotiate your licensing models
- 2 Re-platform your applications
- 3 Consolidate platforms
- 4 Consolidate vendors
- 5 T&T applications

How to get started?

Melkki Application Rationalization Approach

Melkki Approach for Application Rationalization

Rationalization –

the act of making changes to a business, system, etc. in order to make it more efficient, especially by spending less money

Application Rationalization –

practice of strategically identifying applications across an organization to determine which applications should be developed, migrated or retired

**The goal is to
achieve
improvements in
efficiency &
business operations**

Melkki Point of View

– Business Drivers and Reasons

COST SAVINGS €

- **Improved Economies of Scale** – through standardization, efficiency improvements, elimination of redundancies and consolidation in reporting, business process harmonization, technical support, software maintenance, hardware, and facilities

REVENUE AND MARGIN OPPORTUNITIES

- **Time to Market** – Consolidation to modern platforms (Cloud) allow improved development and deployment processes and integration
- **Accelerated Innovation and business differentiation** – Readiness for extended IT (Business Tech / IIoT) across consolidated solutions
- **Higher Reliability of Processes** – Process performance and measurement and reducing chance of failures and errors.
- **Increased Productivity** – From the elimination of non-value add activities and better business analysis, management, and control.
- **Shared Service Advantages** – Transaction processing and technical support.

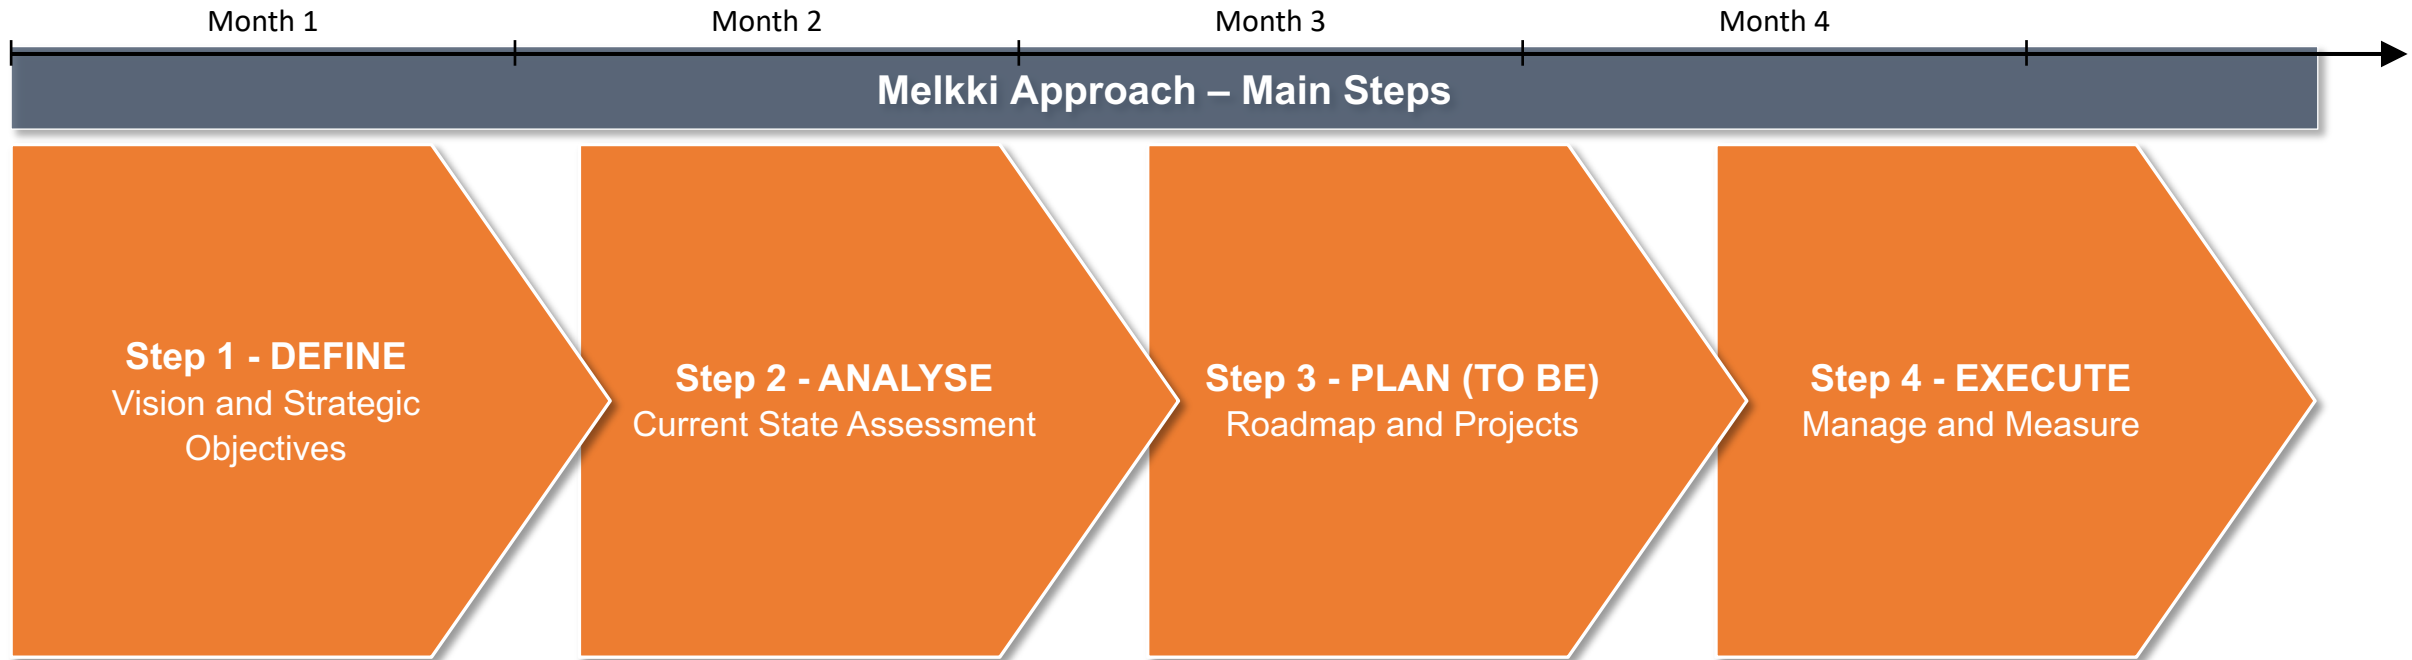

REDUCING COMPLEXITY

- **Business Operations, Infrastructure, and Systems Management Simplification** – harmonization of processes, simplification and standardization of the technical architecture.
- **M&A Readiness** - Obtain synergies of strategic mergers, acquisitions and divestitures

TECHNOLOGY IMPROVEMENTS

- **Higher Quality** – Improve data accuracy and accessibility to support operational control, decision making and strategic planning. Improve availability, reliability, and security of systems and network.
- **New Technology Differentiation** – Moving to e.g. Cloud based, modern platform provides more time and resources for development, by automation of basics.
- **Flexibility** – Cloud platforms and fewer systems and a standards allow increased flexibility to response to changing business requirements.
