

Nokia Digital Automation Cloud

Industrial end-to-end connectivity platform and applications

Juhani Ahonen (juhani.ahonen@nokia.com)

October 2021

NOKIA

1. NDAC
2. Access points and Edge
3. Industrial devices
4. Application framework and applications
5. Options for consortium
6. Support and maintenance for 3rd party SW

NOKIA

1. NDAC

Scales to any size of factory, mine, port, utility...

End-to-end platform
for private wireless
connectivity and
automation.

Comes with spectrum,

edge computing,

access points,

applications through
NDAC catalog,

and industrial devices.

NOKIA

Serving vertical specific blueprints everywhere

Our customers are asking for reliable connectivity beyond Wi-Fi

Energy

- Automate falling conductor disconnect to avoid fire,
- Maintain grid reliability with growing distributed renewables / storage,
- Monitor wind turbines for predictive maintenance,
- Support FAN convergence and automation.

Mining

- Solve Wi-Fi related autonomous vehicle collision, downtime, and resulting wear & tear issues
- Increase safety by monitoring driver fatigue and enable remote drilling
- Increase business efficiency with Push-to-X communication,
- Introduce wall-slope & environment sensors.

Transportation

- Provide connectivity inside the plane (pilots, crew, workers),
- Predict plane departure time using cameras & analytics,
- Replace Wi-Fi and PMR for reliable airfield marshal work-orders & push-to-talk.

Serving vertical specific blueprints everywhere

Our customers are asking for reliable connectivity beyond Wi-Fi

Ports

- Introduce real-time work order systems for cranes & AGV drivers,
- Automate site access system and parameter security,
- Monitor reefers,
- Enable remote control, autonomous cranes, and AGVs,
- Improve worker safety with Push-to-X communication.

Manufacturing

- Digitalize legacy assets for predictive maintenance,
- Fix AGV Wi-Fi imposed low speed & reliability issues
- Connect digital twin machines
- Improve worker safety and enable connected tools
- Supports "lot-size one" manufacturing.

Public safety

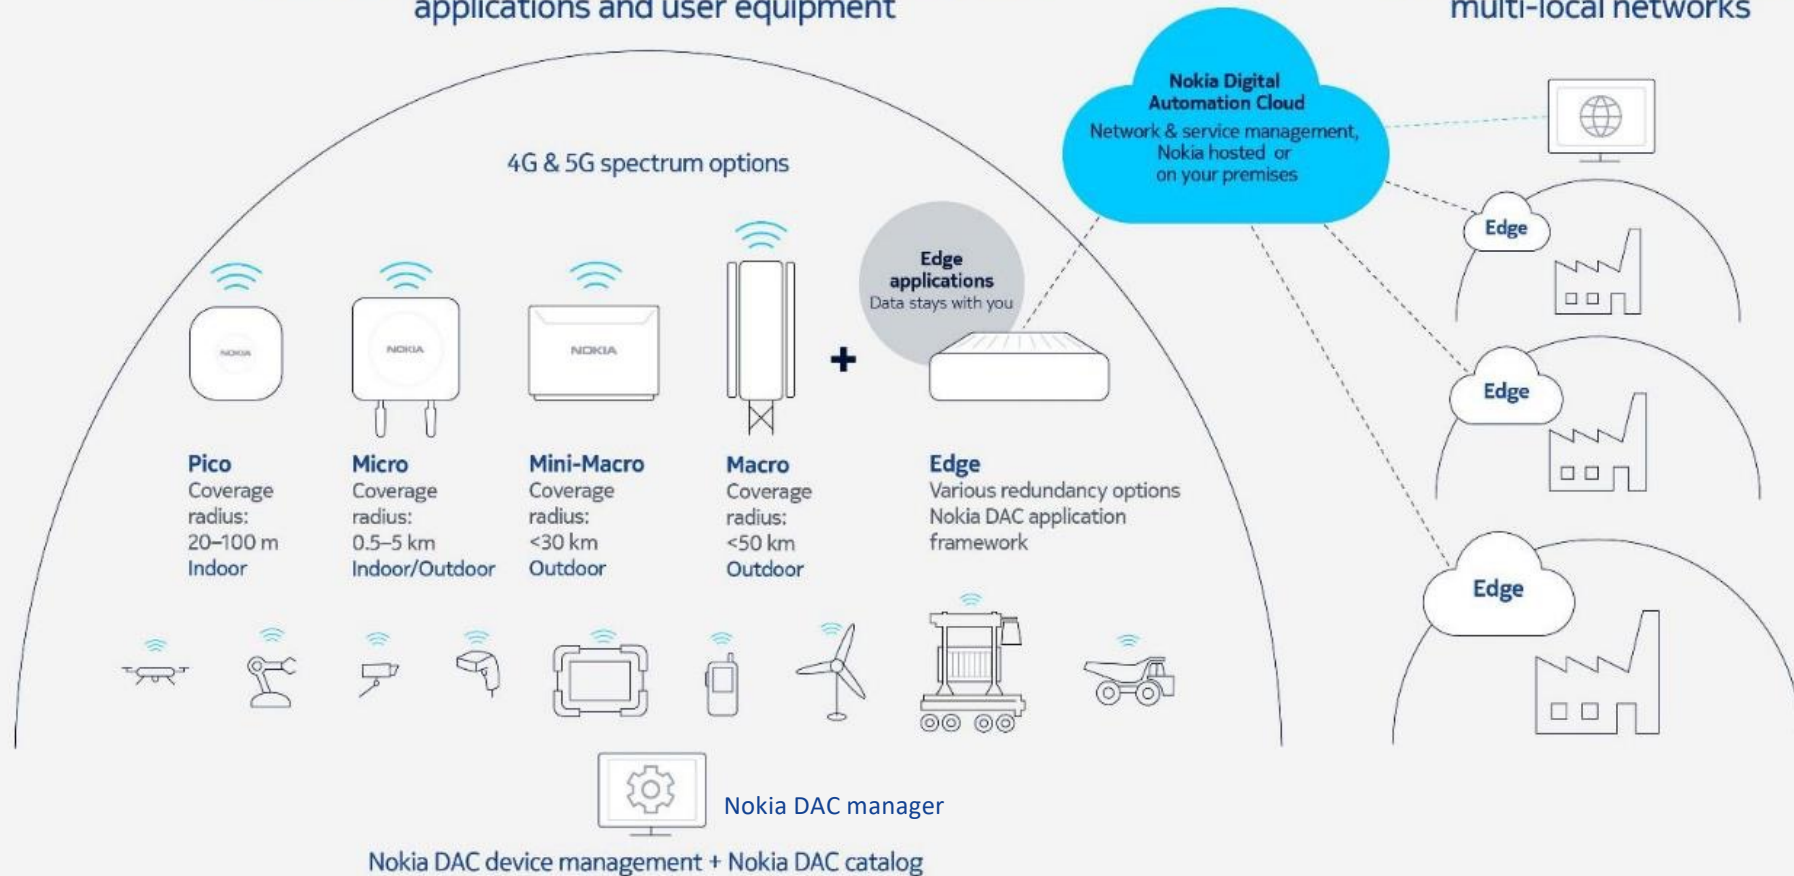

- Aid search & rescue missions with connected UAVs
- Boost traffic safety & event monitoring
- Prioritize fire prevention through live video streaming to improve situational awareness
- Monitor facilities for overheated areas and leakages.

Nokia Digital Automation Cloud

E2E platform for private wireless connectivity and automation.

Comes with spectrum, edge computing, access points, applications and user equipment

Lets you create and manage multi-local networks

NOKIA

2. Access points and Edge

Nokia Digital Automation Cloud supported access points

ASiR = AirScale indoor radio
RRH = remote radio head
MBI = Multiband indoor
MBO = Multiband outdoor

Pico / MBI

4G ASiR-pRRH

5G ASiR-pRRH

Micro / MBO

Mini Macro

mRRH

Macro RRH

4G/5G outdoor rack

AirScale 4G/5G baseband unit

Nokia Digital Automation Cloud Edge server

NOKIA

3. Industrial devices

Nokia Digital Automation Cloud User and customer premise equipment

Integrated ruggedized Nokia Industrial user equipment

Devices with hardened enclosure

- Industrial-grade components and IP67 protection level.
- Designed and developed for heavy use in demanding industries, such as manufacturing, port logistics, and mining.
- Managed, controlled and supported via Nokia DAC device management

High performing devices for different technologies

- Different form factors certified to address various markets and frequency bands, covering customer demands for 4G, 5G and MulteFire
- Devices are tested and validated with Nokia in-house expertise.
- Comprehensive feature set to enable efficient traffic for PROFINET communication and several other protocols, like EtherCAT and Modbus.

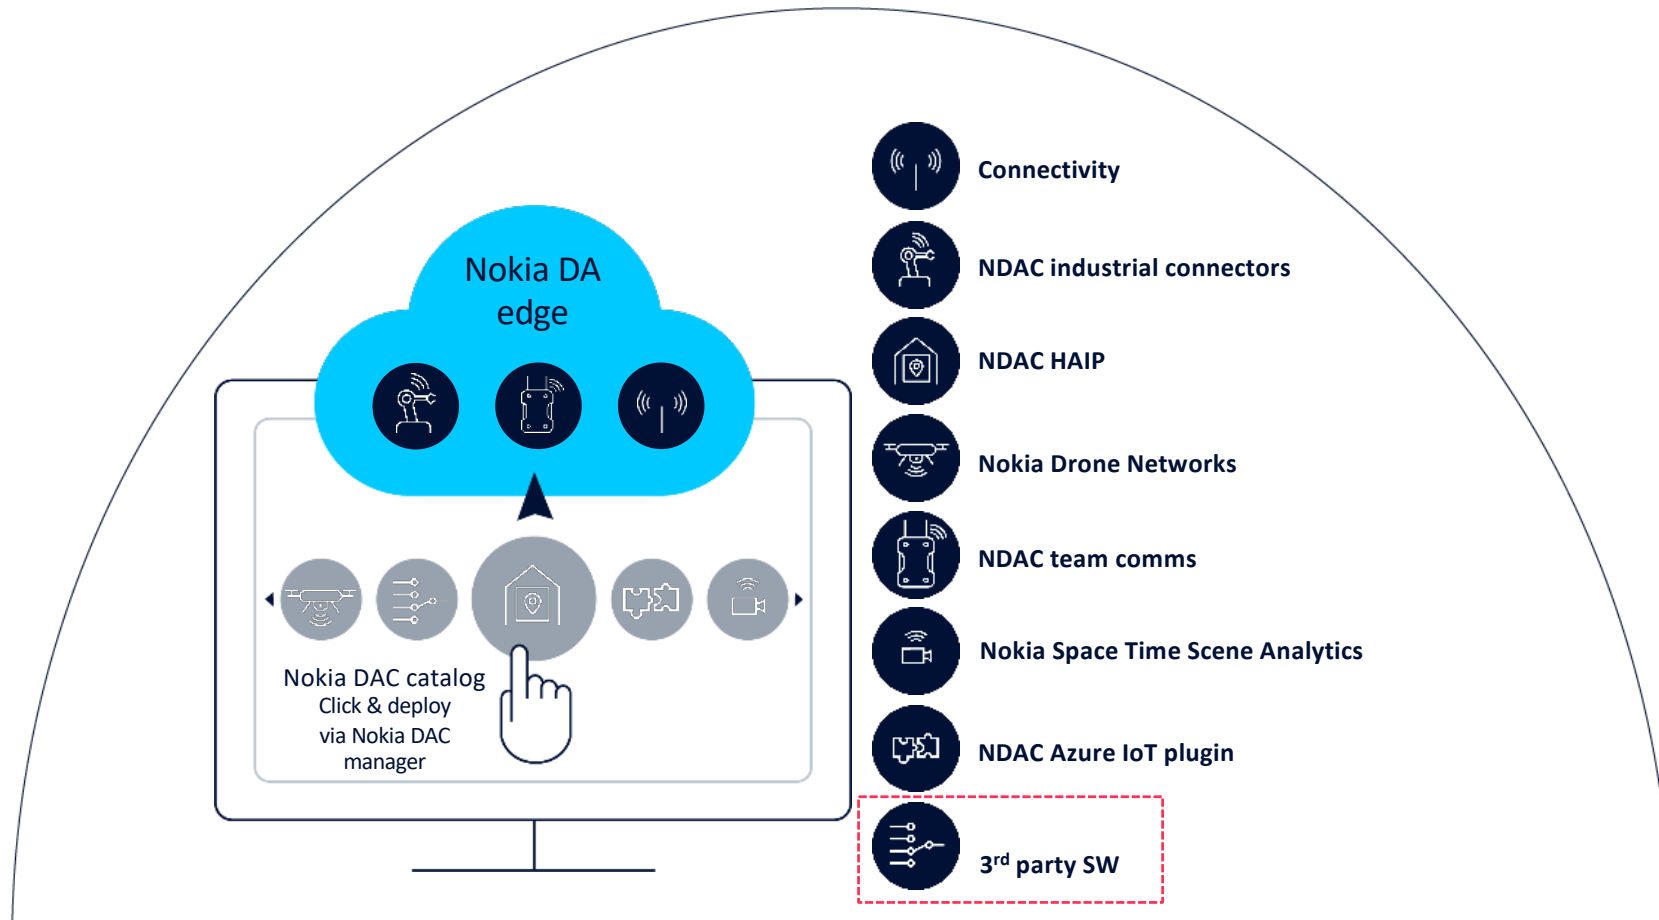

Easy to manage and access

- You get integrated device management in the Nokia DAC private 4G/5G wireless network.
- It supports plug & play and seamless onboarding of user equipment, with scalability to manage thousands of devices.

NOKIA

4. Application framework and applications

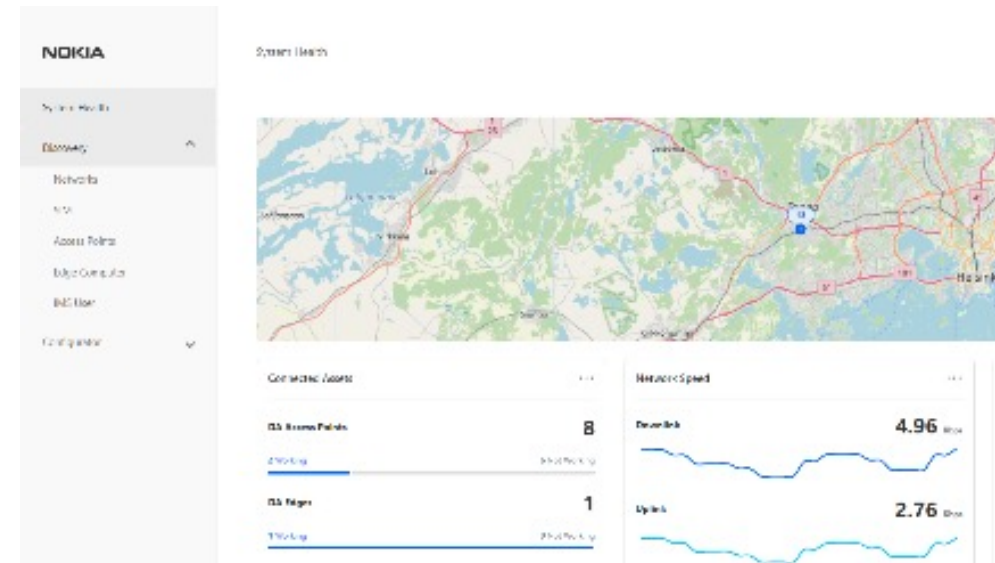

Nokia DAC catalog brings value beyond connectivity

All customer networks managed with single web portal

Nokia Digital Automation Cloud

- Customer account, SIM, HW, network, application management
- All customer networks in single NDAC manager portal and individually manageable
- Access via HTML browser
- Alarms, FM/PM views
- Online trouble shooting tools
- API available for client backend integration
- Same style dashboards available for end clients' self service
- **Deployment of applications by single click**

Secure login from anywhere

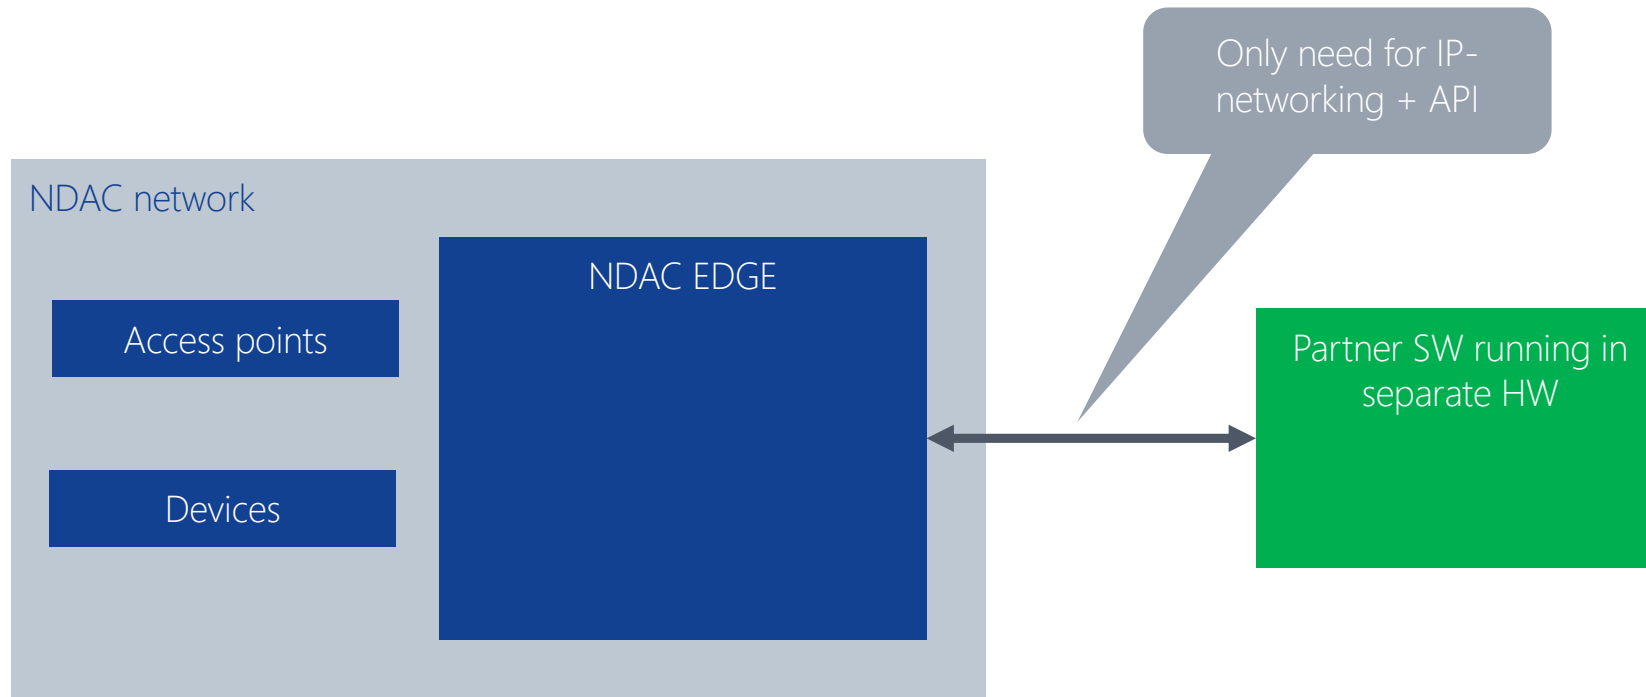

Customer confidential / Nokia internal use

NOKIA

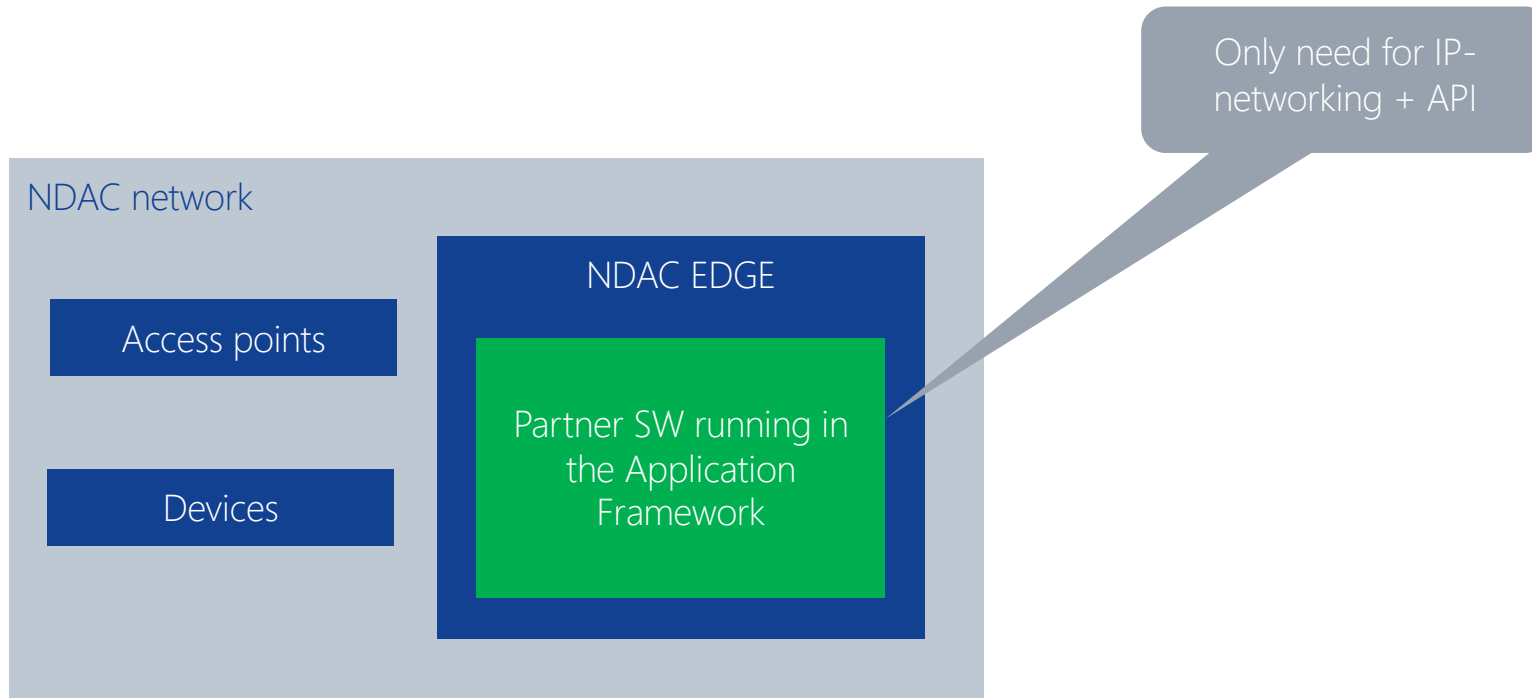

NOKIA

5. Options for Partners

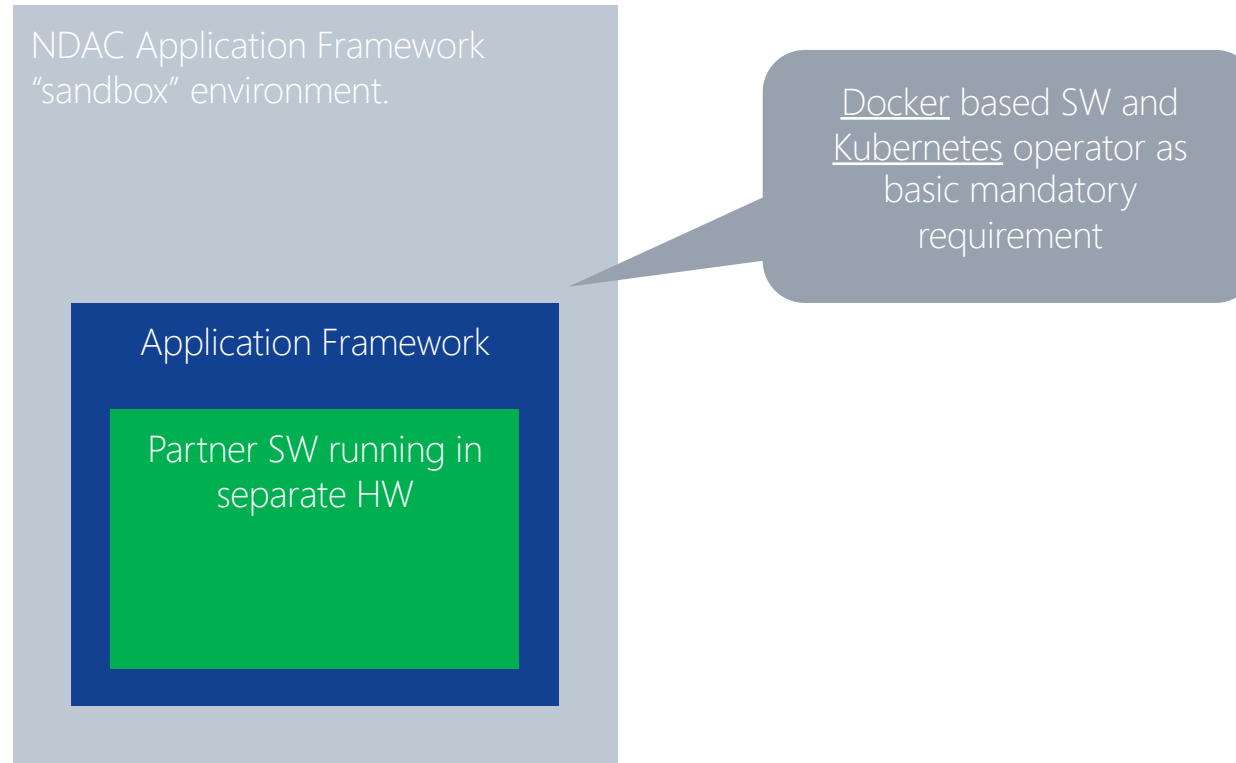

Option 1

Option 2

Option 3

Collaborating with entire ecosystem to drive Industry 4.0

Service provider partners

Expertise in building & operating mobile network or public clouds, spectrum partners.

Industrial bodies and ecosystem partners

Kick starting the industry with more LTE and 5G industrial connected things.

System integrators & consulting

Deeper industry expertise and specialised channel to market.
Broadening the sphere of influence.

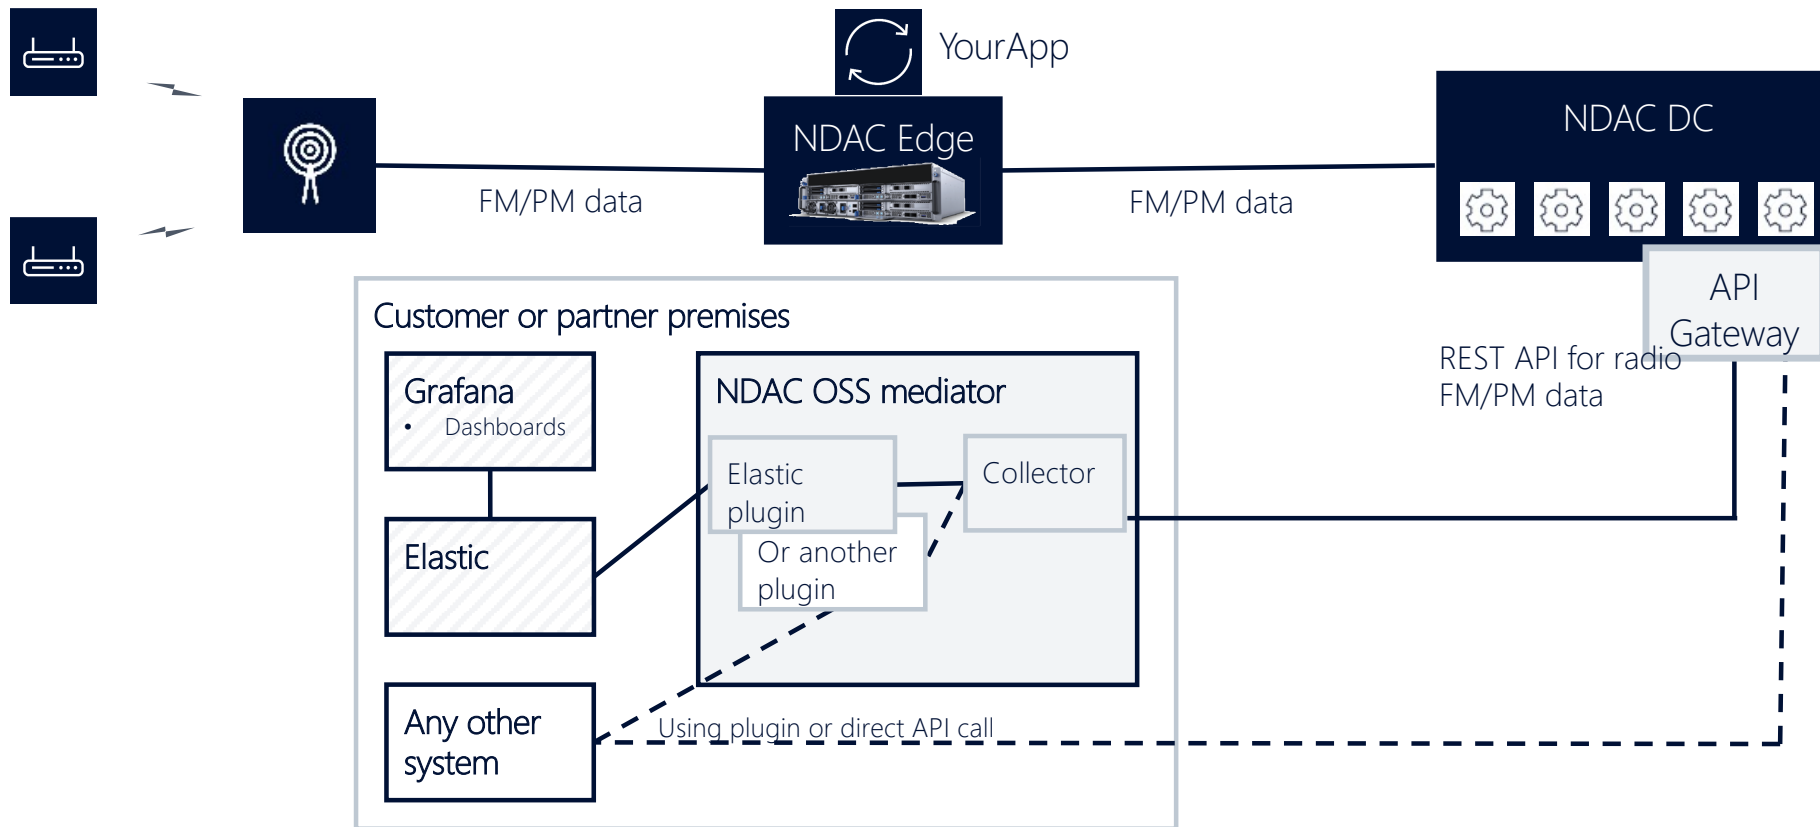

NOKIA

6. Support and maintenance for 3rd party SW

Deploying Your Application To NDAC Edge App Framework

- Data Stays local
- Robust “in own hands” applications on premises
- Application Life cycle management comes with AppFW (deployment, updates, removals ...)
- Common OAM: Alarms, Alerts and performance data can use the same framework as the NDAC itself. Troubleshooting and diagnostics benefits. (see next slide)
- Performance benefits in communications (your app runs near to the core and radio)
- Ecosystem benefits
- Scale together with the Edge Cloud and take benefits of the Geo Redundancy (later)

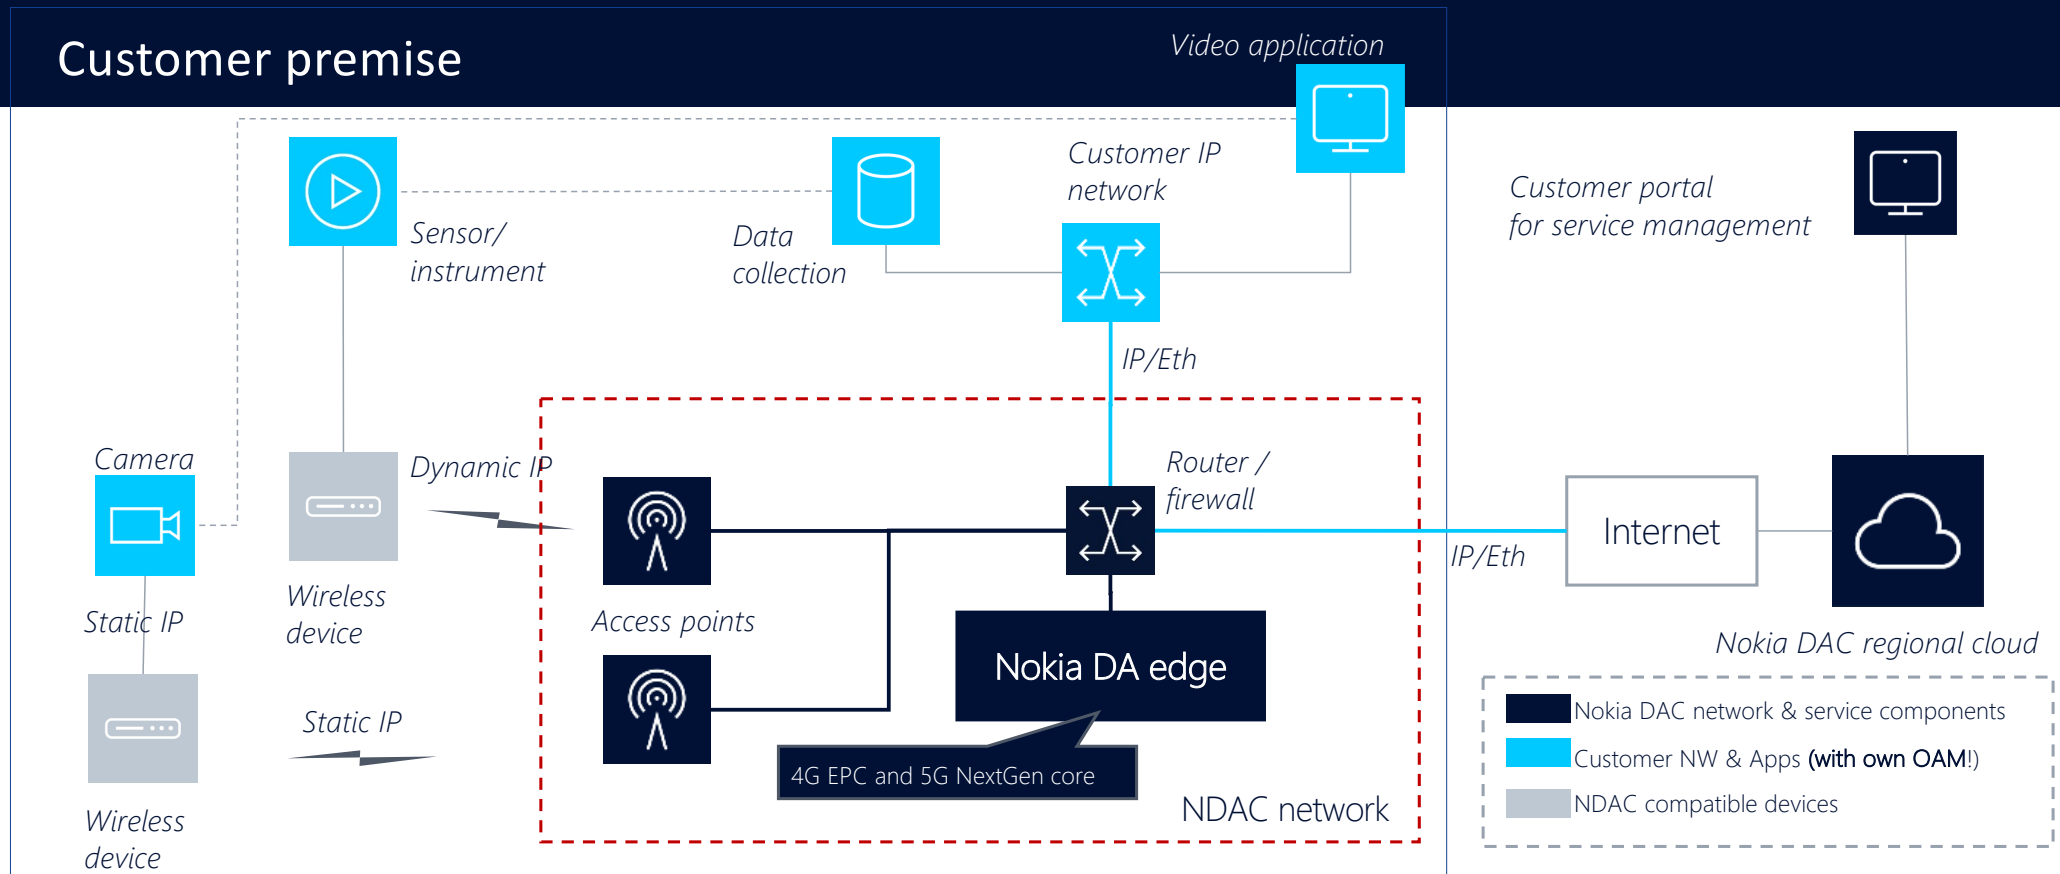

API for Access point FM/PM Data for Customers and Partners

Deploying Your Application Outside NDAC

- Cases where separation of Communications and Application gives benefits
- Integration via NDAC API Gateway
- Separate solutions for
 - Life cycle management
 - OAM
 - Technical support
- Still many communications services are available via NDAC API Gateway

Nokia DAC Solution Overview With Demarcation Points
