Presentation Outline

- What is a Decision Support System (DSS)?
- knowlEdge Decision Support Framework
 - Architecture
 - Implementation Technologies
 - Hybrid Recommender
 - CausaLogic Recommender
 - UIs Design
 - Pilot Applications
 - Examples

What is a Decision Support System?

- A decision support system (DSS) is a software application used to improve a company's decision-making capabilities.
- It analyzes data and presents possible options available as a suggestion
- Decision support systems bring together data and knowledge from different areas and sources to provide users with information beyond the usual reports and summaries.
- Mainly a DSS components are databases, software/algorithms and User Interfaces (UIs)

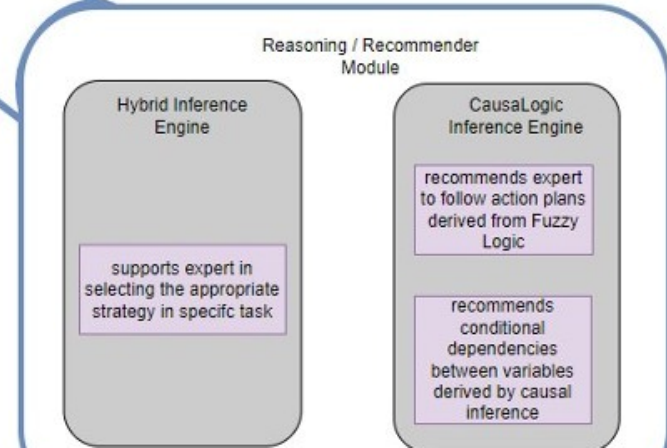

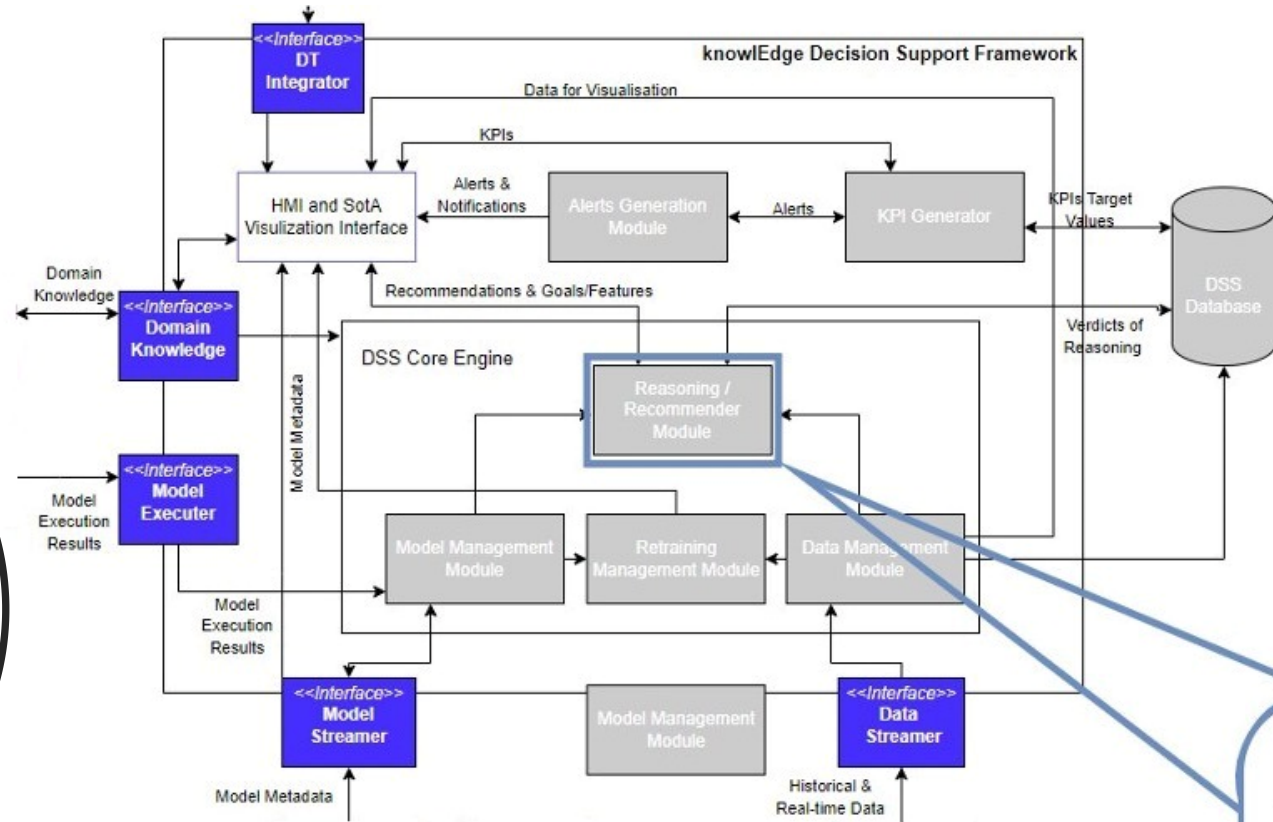

knowEdge Decision Support Framework (DSF)

- ✓ An AI-driven DSS supporting various AI/ML algorithms for both Data Analysis and Inference
- ✓ In terms of connectivity, it supports HTTP protocol, MQTT, web sockets and IDS Connectors
- ✓ It supports various types of recommenders
- ✓ It provides web-based user interfaces
- ✓ It offers eXplainable AI (XAI) mechanisms to boost AI interpretability
- ✓ It supports KPIs visualization & management

knowlEdge DSF Architecture

knowEdge Decision Support Framework (DSF) – Implementation Technologies

knowEdge DSF: Back-end

- **Python for Recommenders Development**
- **Neo4j for Ontological Graph Development**

knowEdge DSF: Front-end

- **ngx-admin Framework**
 - a template for faster implementation because it is efficient, customizable and claims to optimize 480 hours of development time
- **Angular Material, Nebular and Bootstrap**
 - for prebuild components
- **ChartJS for graphs etc.**

ngx-admin

knowEdge DSF: Deployment, Communication and Security

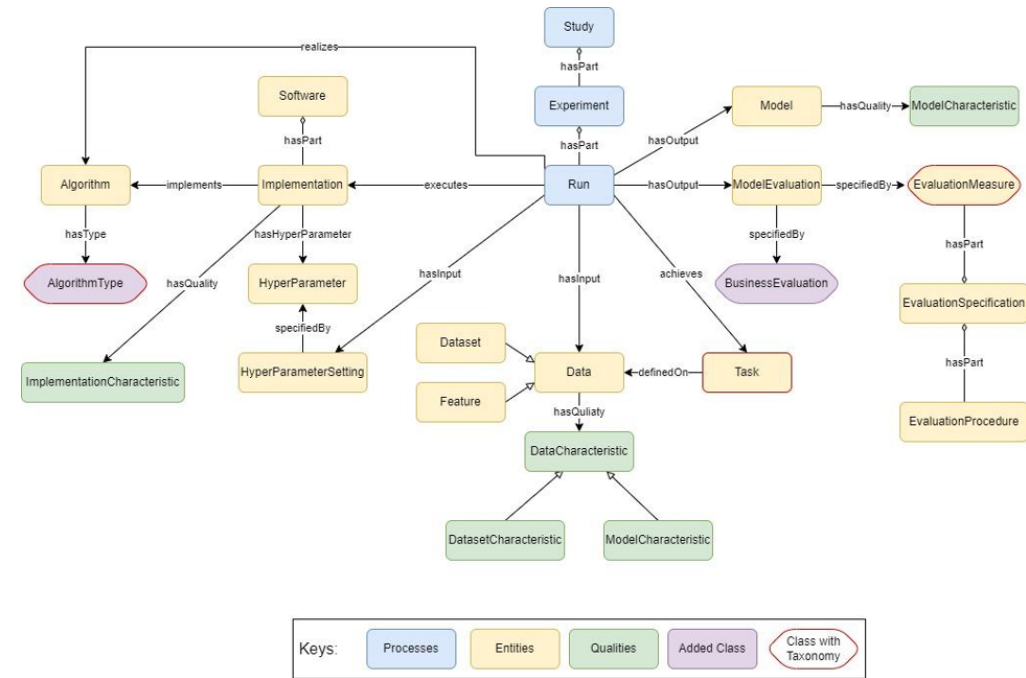

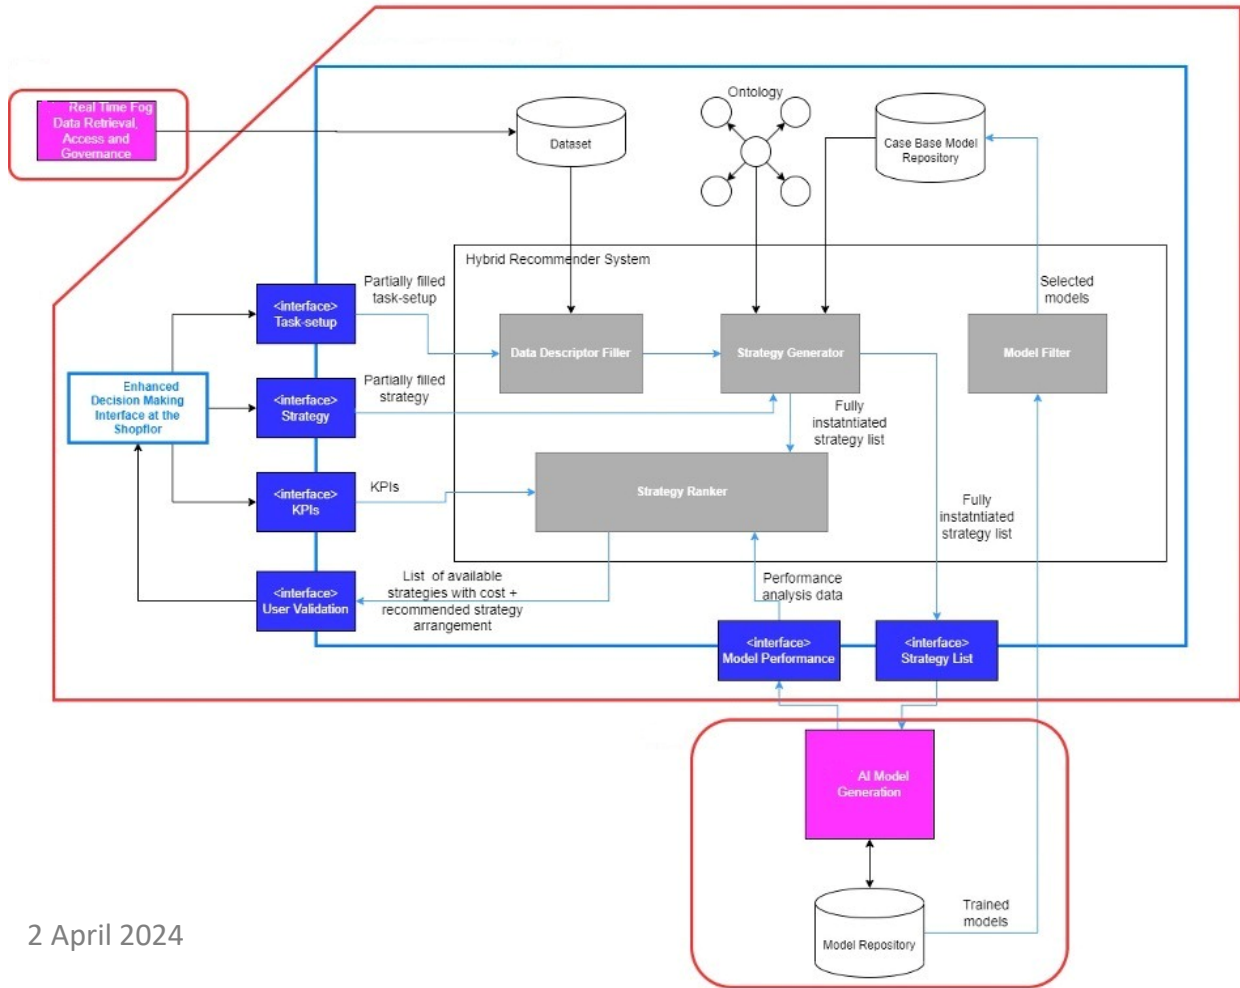

- **KEYCLOAK** for Identity Management
- **WebSockets** and **Flask**
- **NGINX HTTP Server** and **REST Services**
- **Elastic Search** and **Kibana**

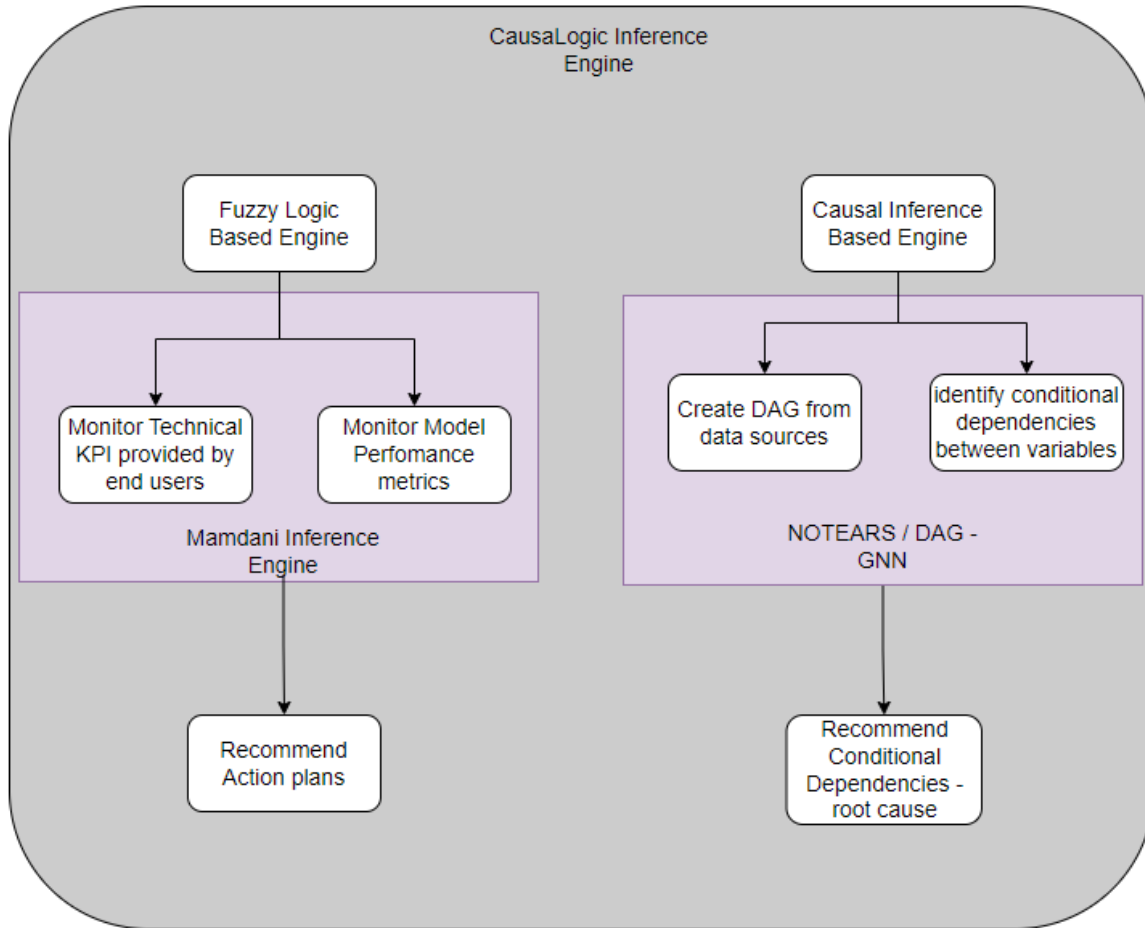

Flask

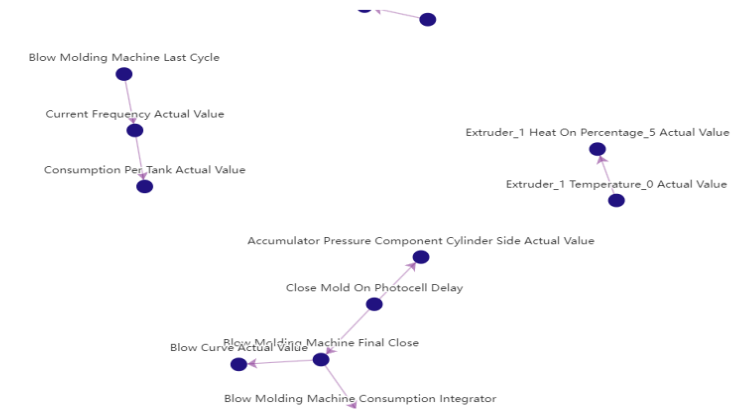

Hybrid Recommender for Optimal AI Model Selection

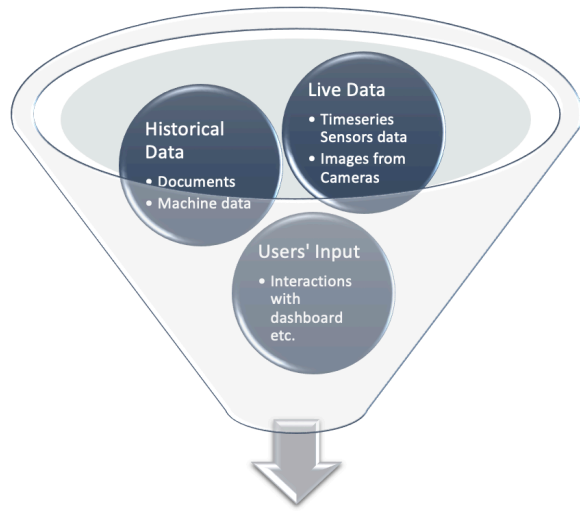

CausaLogic Recommender

DAG-GNN Method

Action Plan Crisp Value	Defuzzified Value
low	Simple notification indicating that production process is performing accurate
medium	<ol style="list-style-type: none"> Notification about the value of the KPIs Recommendation to conduct XAI analysis to the model Information on how to increase KPIs based on historical data if any Notification about the products that their production deviate
high	<ol style="list-style-type: none"> Alert Generated from dashboard Recommendation to conduct XAI analysis to the model Information on how to increase KPIs based on historical data if any Notification about the products that their production deviate Root Cause analysis if applicable

Dashboards

Alerts & Notifications

XAI & AI Models Metrics

Graph & Table Representations

Expected Input and Outputs

UI Design Principals

- 1. UIs to support XAI
- 2. Aesthetic and minimalistic design
- 3. Common design and 'feeling' with the rest UIs of the project like the Marketplace
- 4. Common and consistent UI elements
- 5. Widely used input controls and navigational elements
- 6. Recognition rather than recall for by making options/actions available + Effective Error Messaging
- 7. Design, user feedback and re-design

knowlEdge DSF – UIs Design
